

A healthy body starts here

REFILL HERE

The revolutionary permanent, indoor/outdoor water bottle refill station

Amazing Data

Each unit has a digital flow meter recording usage and activity. In 2017 units will also incorporate remote water data monitoring, leak detection, usage figures, scheduled reporting (daily, weekly, monthly) and sustainability information.

Graphics and Branding

Meet PAT products are defined by their unique ability to promote your brand, an image or message. Each product is designed having simple interchangeable graphics panels with you controlling the look. Dress up PAT!

How's the water?

Beautiful!! All Meet Pat water stations come fitted industry approved drink safe plumbing components. They are fitted with a 5 micron carbon water filter as standard which is easy to remove if not required or replaced.

"No touch" nozzle design

Prevents bottle rim from coming into contact with the nozzle.

Water Window

Accessible from both sides and has a bottle rest for single handed operation. If you're a mum holding a bub or you've just got one hand occupied, this is for you! Recognizable bottle shape with a splash reducing cross mesh drain cover.

Accessibility

Disability accessible and child friendly design. Soft touch taps, with lower side tap and wheel up access.

Splash Free Drainage

Unique X splash reducing mesh cover.

How Strong?

Meet PAT permanent products have a tough skin and strong bones. Units have up to 8mm thick galvanized and powder coated steel chassis hidden within the units. They are mounted to a powder coated steel bollard and secured with stainless steel screws. The graphics panels are made from impact proof, 5-7 year UV resistant 6mm polycarbonate sheeting. The external chassis is made from heavy duty aluminum, powder coated with dulux industrial coating with marine grade 316 stainless steel components.

This Way or That

Many different plumbing and mounting options to cater for a wide range of installation budgets. Including sub-surface drainage pit and dog bowl mounting.

All Meet PAT products are designed and manufactured in Australia

OPTIONS

Sticking with our ethos of accessibility, Meet PAT permanent products are designed in a unique way. This enables multiple configurations including two height variants of 1300mm and 1900mm.

In-ground dog bowl with foot activation

Sub-surface drainage pit
